### Statement

The assessment of biodiversity, monitoring changes, sustainable exploitation of biodiversity, and much legislative work depends upon validated knowledge of its components: the taxonomic diversity. However, information and expertise on the European animal species is scattered around numerous public and private organisations, they are in different formats and standards, and are of unequal quality. Fauna Europaea provides a basic tool for the European community, namely a uniform database on the European land and freshwater animal taxonomic diversity. The Fauna Europaea project has build a public WWW service on the scientific names (with selected additional data) of the present living multicellular European land and freshwater animal species. See [www.faunaeur.org](http://www.faunaeur.org) for its website.

The data on the land and freshwater gastropods in the Fauna Europaea database are provided by the present author (Ruud A. Bank). At the request of the scientific community, I here provide a text file on which the [www.faunaeur.org](http://www.faunaeur.org) is based upon. I would like to stress that the latest update of the website is from December 2010, whereas the latest update of the present text file is from July 24<sup>th</sup>, 2011. Futhermore, the systematic framework of the Gastropoda of [www.faunaeur.org](http://www.faunaeur.org) is based on CLECOM, as published in the paper of BANK *et al.* (2001). In the current text file this classification is now abonded. The current systematic framework follows that of BOUCHET & ROCROI (2005) as it is expected that this classification will be the golden standard in the scientific community for the next decades.

The current list will be updated regularly. Therefore, the author encourages others to provide him with remarks / corrections / additions concerning the present list. Improvements are welcomed all the time! As a further step, I will provide in due time reference lists, as well as the primary citations of the taxa involved.
